

## 5-Port Ethernet Switches

### How to install an Ethernet Switch

You should have the 10/100 Fast Ethernet Switch (we've been using D-Link DSS-5+, but it could be another brand), the AD-DC Adapter cord, and a 350 MHZ Cat 5 Patch cable which is also know as an Ethernet cable.

Plug one end of the Ethernet cable into the back of the phone where it says 10/100 PC.

Plug the other end of the Ethernet cable into the #5 slot in the back of the 10/100 Fast Ethernet Switch. Plug in the power cord.

Plug the other end of the power cord into the wall. Before you leave make sure the computer you just connection can get onto the Internet.
